A FRESH OPTION IN WRINKLE RELAXERS

Why Daxxify?

Let's chat about Daxxify — because everyone's asking about it. Here's why I'm excited to finally offer it at The Boujee Blonde.

SOFT · BALANCED · BOJEE

With **Marissa Hartman, FNP-C** · Slidell, LA · theboujeeblondeaesthetics.com

What is Daxxify?

No hype. Just the honest version.

An FDA-approved neuromodulator with a different formulation.

Daxxify relaxes targeted facial muscles to soften expression lines. Many patients ask about it as an option for areas like frown lines and other common wrinkle-relaxer treatment zones.

If you've had Botox or Dysport, the idea is familiar territory. What makes Daxxify different is **how it's built** — a unique peptide-based formulation that sets it apart from traditional neurotoxins, and the reason it behaves a little differently once it settles in.

"My job isn't to hand you the newest thing on the shelf — it's to tell you honestly whether the newest thing has a place in your plan."

02

Why patients are *curious*.

Three things come up in almost every conversation.

WHAT PEOPLE NOTICE

THE HONEST DETAIL

It starts working quickly

Many patients notice softening on a faster timeline than they expected.

The formulation is different

Peptide-based and genuinely distinct from traditional neurotoxins — many providers feel patients notice improvements in overall skin quality and texture.

It may last longer

The big one people ask about — and it deserves an honest answer, below.

On duration — my honest take.

I never promise a certain timeframe, because every body is different. Some patients metabolize neuromodulators faster, some slower — with every brand. But if you happen to be someone who gets a longer duration out of Daxxify, that's an amazing bonus.

03

Is it better than *other tox?*

Not always — and that's the point.

The best neurotoxin depends on your goals, your facial anatomy, your budget, your treatment areas, and how your body responds. That's why I stock more than one.

OPTION	KNOWN FOR	WORTH KNOWING
<i>Botox</i>	The gold standard, most studied	The benchmark everything else is measured against
<i>Dysport</i>	Settles in a touch faster for some	Diffuses a little wider — great for some areas, not all
<i>Daxxify</i>	Peptide-based formulation	Fast onset for many; potential for longer duration varies by person

No brand wins for everyone. A personalized plan always wins — that's not a slogan, it's literally how the consultation works.

04

How I decide *what's right for you.*

At the end of the day, my job isn't to tell everyone to get Daxxify.

1

We talk goals first

What bothers you, what you want to keep moving, and what "great" looks like to you — before any product name comes up.

2

I map your movement

Smile, frown, raise your brows. Your dose follows your actual facial expression — never a template.

3

We match the product to you

Some patients may love Daxxify. Others may still be a better fit for a different neurotoxin. Your anatomy, history, and budget make the call.

Good to know

Results and duration vary from person to person. A consultation determines whether Daxxify is the right fit. Medical aesthetics are never one-size-fits-all.

SOFT. BALANCED. BOUJEE.

Curious if Daxxify is *right for you?*

Book a consultation with The Boujee Blonde Aesthetics. We'll look at your goals, your movement, and your history — and choose the neurotoxin that's the best fit for you. Even if that isn't Daxxify.
